

**New and improved access points**

Eight new and improved access points have been sensitively added along Rail Corridor (Central) to make it more accessible to the public and residents living nearby. The eight access points (map below) are:

1. New landscaped stairs at the southern end of the Upper Bukit Timah truss bridge near Rail Mall. Previously, visitors were climbing a badly-eroded slope to reach the Rail Corridor. Concrete steps, made to look like timber sleepers, were laid on the slope to make the climb safer.
2. New landscaped stairs next to the Singapore Quarry Bridge, now links visitors to the Dairy Farm Nature Park. We cut into the slope and laid simulated timber sleeper steps to form the new access point.
3. Two new flights of landscaped stairs are connected by a green rustic path at the end of Hindhede Walk. Laid with reinforced concrete, the new steps and green path will provide easy and comfortable access to the Rail Corridor for nearby residents.
4. A new 4m wide paved path at Bukit Drive. This path, made of porous binded aggregate material, leads to the Bukit Timah Nature Reserve.
5. A flight of existing brick steps at the southern end of Hindhede Bridge was restored and enhanced for users. Two more steps at the base and new railings with handrails were added.
6. An existing flight of concrete stairs leading to Jalan Anak Bukit, near the Anak Bukit Flyover, was repaired.
7. New barrier-free access ramps now link the bus-stop at Jalan Anak Bukit and the Mayfair Park Estate. We worked with the Mayfair Park Neighbourhood Committee and built the ramps so that the elderly, wheelchair users and families with prams can use them to go to and fro the bus stop and estate easily.
8. A new path made of porous binded aggregates with embedded rails, was laid on the exact alignment of the previous railway tracks at the Bukit Timah Railway Station, south of the Bukit Timah truss bridge.

## ANNEX A

### ACCESS POINTS AT RAIL CORRIDOR (CENTRAL)

Landscaped stairs at the southern end of the Upper Bukit Timah Truss Bridge leading to Rail Mall

Landscaped stairs on the slope next to Singapore Quarry Bridge, which will lead you to Dairy Farm Nature Park

Rustic trail with a flight of steps to the end of Hindhede Walk and near Springdale Condominium

4m wide porous binded aggregate path to the Bukit Drive, where you can walk to Bukit Timah Nature Reserve

Restored brick steps on the slope next to the Hindhede Bridge, leading to Hindhede Walk, where you can walk to Bukit Timah Nature Reserve

Restored staircase leading to Jalan Anak Bukit under the Pan-Island Expressway (PE) viaduct.

Barrier-free access linking the bus-stop at Jalan Anak Bukit and Mayfair Park Estate

A porous binded aggregate path at the Bukit Timah Railway Station, with rail markings embedded at the exact position of the former railway track
