

# 29, 31 & 33 MOUNT SOPHIA (SOPHIA HILLS DEVELOPMENT)

## 2018 Special Mention

Informed by extensive research, led by a Conservation Specialist, the three buildings have been carefully and meticulously restored using appropriate materials, techniques and finishes. Historic building elements were also upcycled for use elsewhere in the development. On-site heritage markers and engagement with the alumni of the schools and college, which once occupied the three buildings, keep alive the legacy of the educational function and give a sense of continuity to the residential neighbourhood.

While the technical restoration was well executed, the scale, form and proximity of the new build could have been better considered to further enhance the qualities of the three distinct heritage buildings.
